## DIFFICULTIES IN MARBOR OFERATIONS AT SIBENIK

The Harbor and Public Warehouse Workers' Collective in Sibenik has made great advances in its first year of operation, despite poor supplies of materials and the construction of the wharf, which made it difficult for ships to dock.

Because of the wharf construction, the leading of bauxite ore is carried on at the Vrulje mole under very difficult conditions. The ships cannot dock close inshore, but are leaded by means of temporary bridges extended on barges which connect the ship with the wharf. Loading in this manner is difficult and, especially in bad weather, dangerous.

The operations at the port are unsatisfactory from a technical view point. The bulk of freight handling is done by manual labor supplemented by ship cranes. Two transports which were assigned recently to the enterwise to facilitate the handling of freight are obliged to lay over at Rijska and arrive in Sibenik late.

While the wharf is being built, a railroad track to transport goods in freight cars directly to the loading and unloading point is being constructed. The laying of the track has been halted because of an unnecessary 5-months' delay in the delivery of tics. Once completed, the track will speed up freight handling by about 70 percent.

Loading of lumber into ships has been carried on under great difficulties. Lumber has been scattered about the entire depot, often at a distance of 200 meters from the above. Three operations go forward simultaneously at the depot: merchandise is unloaded from the railroad cars, hauled to the loading place, and loaded into ships. Sorting also is often done there. The enterprise does not handle the unloading from the cars and sorting; but these operations often delay the loading aboard ship by 30-40 percent.

## RESTRICTED

If goods were forwarded to the port properly prepared for loading, already sorted and arranged in the car according to their destination, the work would be greatly facilitated.

The unsystematic flow of goods, with which almost all the major Yugoslav ports have to contend, has complicated operations in the harbor. Senders do not report goods to be shipped via the port, and goods accumulate there, taking up space and often suffering damage. Many senders do not ship their goods in sacks, and whether because of the lack of packing or of manpower or because of untable weather, this often hinders operations. Moreover, the transport by sea of merchandise which could have been shipped directly by rail often clogs the harbor. For example, the Dalmatian Mines in Streric send coal to Susak via Sibenik by sea, although they could use rail transport. After shipment into Sibenik, the goods, are unloaded from the cars and sometimes stand for months awaiting ship transportation to Susak. If the goods were already loaded in freight cars, they could be sent to Susak speedily by rail, aliminating reloading and storage at the harbor.

The Workers' Service of Supply has no source of it own from which to purchase food, and so is dependent upon the municipal supply net. The steps that have been taken to provide winter supplies for the port workers have met no success thus far. The mess halls can serve only 150 workers; a large new blue- and white-collar workers' restaurant is badly needed. However, the workers will receive more rationed food when the decree granting them R-lb ration cards goes into effect on 1 December.

The housing problem is becoming more acute with the increase in the number of workers. A sufficient number of beds for the workers' sleeping quarters has not yet been provided.

As yet there are no sanitary facilities in the Sibenik wharf area. The construction of baths, dressing rooms, and toilets was begun but suddenly dropped, although they could have finished by the end of 1948. As the construction of these installations is not only in the interest of the harbor workers and of the enterprise, but also in the interest of the entire city, more attention should be paid to these projects.
